

RELO BS

DECK FASCIA BRACKET SET

The **RELO BS** deck fascia bracket set enables quick and easy installation of continuous fascia boards around the entire perimeter of a deck.

Whether installed parallel or end-on to the substructure, clean and secure connections can be effortlessly achieved.

Thanks to the high material thickness, the system offers outstanding stability and reliable support for the attached fascia elements.

Fascia boards can be made from standard decking boards or combined with RELO V ventilation profiles, which provide optimal cross ventilation underneath the deck.

The fascia brackets feature pre-marked cut lines for easy height adjustment, allowing for flexible use. Fascia heights of up to 180 mm are easily accommodated.

RELO BS		
Description	PU	Prod. No.
Bracket Set	4 PCS	046104000
