

# RELO KV

## CLICK-IN CONNECTOR

The **RELO KV** click-in connector is the perfect complement to the RELO aluminium sub-structure joists.

The click-in connector enables the creation of rigid and code-compliant counter batten constructions with exceptional ease and speed.

The substructure rows are effortlessly connected to the counter battens using the click-in connector, eliminating the need for time-consuming removal and reinstallation of individual rows.

This construction design maintains a flat deck surface and prevents lifting of the support points, particularly at the edges.

The optional positioning screw allows for pre-fixing to the counter battens, ensuring precise alignment and a secure hold of the click-in connectors.

Each intersection requires one click-in connector, with approximately 1.7 to 2 connectors needed per square meter.

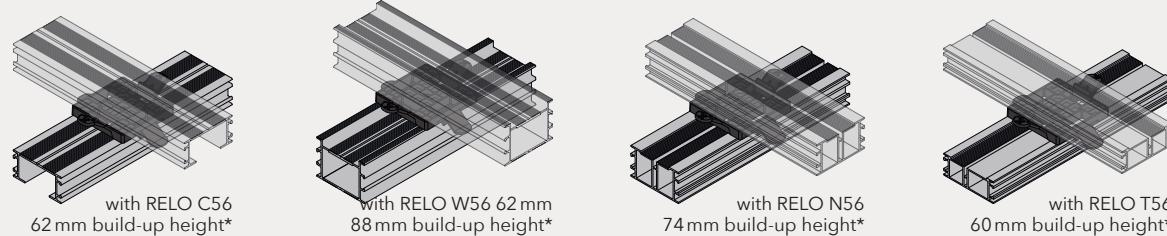

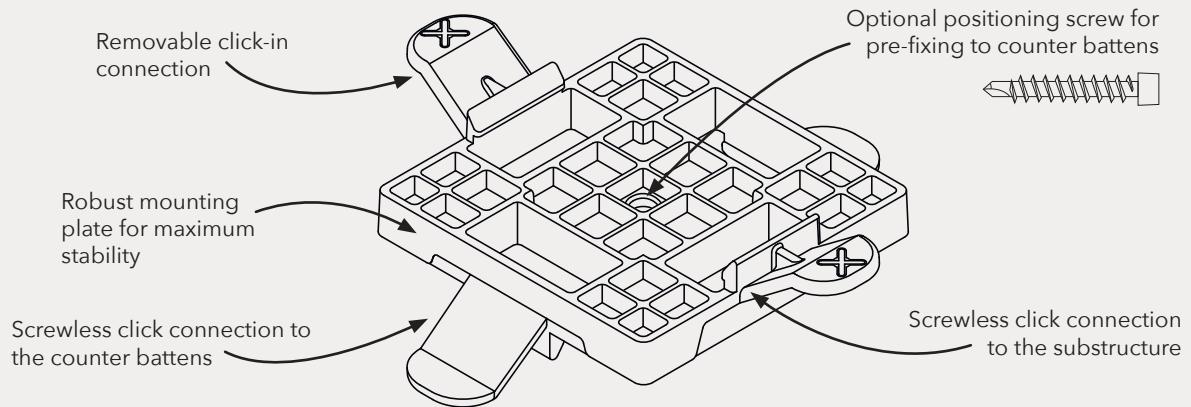

OVERVIEW	
<b>Dimensions:</b>	Mounting plate 60x60mm   Height 8mm
<b>Material:</b>	Recycled black PP (Polypropylene) UV and weather resistant
<b>Mounting type:</b>	Click-in connection
<b>Substructure:</b>	Compatible with RELO C56, W56, N56 and T56
<b>Accessories:</b>	Positioning screw UNIA1 4.2x22 mm

RELO KV click-in connector		
Description	PU	Prod. No.
KV 56	25 PCS	034305000

\*without decking boards and connectors

#### CALCULATION EXAMPLE

Terrace 4x6 m | centre distance 0.45 m

#### SUBSTRUCTURE

$4\text{m} : 0.45\text{ m centre distance} + 1 = 10 \text{ rows (60m)}$

#### COUNTERBATTENS

$6\text{m} : 2\text{ m center distance} + 1 = 4 \text{ rows (16m)}$

#### CLICK-IN CONNECTORS

$10 \text{ rows} \times 4 \text{ rows} = 40 \text{ pieces (1.7 pieces per m}^2\text{)}$
