

RELO VU

HEIGHT ADJUSTMENT SET

The **RELO VU** Height Adjustment Set is the perfect complement to the RELO V ventilation and drainage profiles.

It allows you to easily and quickly compensate for height differences of up to 18 mm between the RELO V profile (height 20 mm) and the decking board.

The set includes a 6 mm high click adapter and three additional spacers in thicknesses of +2 mm, +4 mm and +6 mm.

The matching mounting screws for installation on the substructure are included.

Each spacer features a stacking guide, enabling simple, precise, and effortless installation.

The RELO VA support profiles are automatically guided in the click adapter for a perfect and secure connection.

Depending on the spacing of the substructure, 2 to 3 Height Adjustment Sets are required per RELO V ventilation and drainage profile.
